### About Me

I am a passionate and dedicated Full-stack developer with a strong background in software development and a keen interest in building scalable, secure, and user-friendly applications. My journey into software development began with a deep curiosity about how robust web applications are constructed and a desire to master the frontend and backend technologies that power them. I have honed my skills in software development, leading to successful personal projects that involve complex authentication systems, custom user models, data fetching, and seamless integration of frontend and backend with APIs.
